

**CHEMICAL INJECTION  
AND  
DOSING SYSTEM**

# DESIGN PHILOSOPHY

Chemical Injection Skids or pump skids are terms used to describe integrated packages mounted on a common base plate.

The skids generally include a combination of tanks, piping, chemical injection pumps or chemical transfer pumps, instrumentation, valves and control systems.

The chemical injection systems are mainly used to inject a precise and accurate amount of chemical into a system with the required back pressure, continuously or at intervals.

Applications cover a spectrum of typical process requirements such as:

Asset integrity: biocides, corrosion inhibitors, scale inhibitors, oxygen scavengers.

Flow assurance: hydrate inhibitors, emulsion breakers, foam control and drag reduction.

Refinery: corrosion control, fouling control and fuel additives etc.

We are specialized in design and fabrication of transportable/permanent, skid mounted chemical injection systems.

These systems are built to customer requirement and in accordance with international design codes/standards and made with materials suitable for the dosing product used.
